## (54) OVERVOLTAGE PREVENTIVE UNIT OF ELECTRICAL APPARATUS

(57) Abstract:

PURPOSE: To reduce a failure when an overvoltage preventive circuit is broken down, by removing a connector and replacing only the overvoltage preventive unit when the overvoltage preventive circuit is

CONSTITUTION: When an

and a cost can be effectively reduced normal control circuits is prevented of an electrical operator, a failure of overvoltage preventive circuit is substrate 6 if desired, only the applied to a control circuit 7 and the a varistor 10 is broken and two wires broken due to a connection mistake an overvoltage preventive circuit is substrate can be easily replaced when connector 12' of a control circuit connected to or disconnected from a preventive circuit substrate 8 can be electrical apparatus 5 can be burnt out, so that the overvoltage is are short- circuited and a fuse 9 is apparatus 5 through a power plug 11, overvoltage is applied to an electrical broken. Thus, for example, when the protected. In this case, since a connector 12 of an overvoltage
